Cardiovascular Screenings

Northside Hospital's Heart and Vascular Institute is offering a free screening to determine risk for heart and blood vessel (cardiovascular) disease, or CVD. CVD remains the number one killer of Americans, according to the American Heart Association. A range of factors can raise your risk of developing CVD and having a heart attack or stroke. The more factors you have, the greater your risk. It is essential that you measure your risk for CVD and make a plan for how you can prevent it.

The comprehensive screening will be administered by health care professionals and will include a risk assessment, blood pressure reading, total cholesterol (HDL, ratio of TC/HDL) and glucose testing, body mass index (BMI) analysis, and a one-on-one consultation with a healthcare professional.

Date	Time	Location
Saturday, February 21, 2015	9 a.m. - 12 p.m.	Atlanta
		Northside Hospital Doctors' Centre 980 Johnson Ferry Road 3rd Floor Atlanta, GA 30342
